

MALTA HARNESS ACCESSORIES

The right strap should feel simple, quiet, and solid from the moment you use it. Malta Hunting Safety straps are designed for dependable performance in the woods, giving hunters the confidence to secure their setup and focus on the hunt.

PART #	ACCESSORY	WEIGHT
HEA1000	TREE STRAP	.6 LBS
HEA2000	CLIMBING STRAP	1.4 LBS
HEA3000	SUSPENSION RELIEF	.2 LBS

TREE STRAP

The Malta Hunting Safety Tree Strap gives hunters a dependable connection point when using a full-body safety harness in a tree stand. Built to pair with Malta Hunting Harnesses, the strap wraps around the tree to create a reliable anchor point during the hunt.

Made with high-strength polyester webbing and durable steel hardware, the Tree Strap is built for dependable field performance. Its adjustable design fits a range of tree trunk sizes and allows hunters to position the strap high enough to help keep the harness tether taut while seated.

With a 300 lb. max user weight capacity and construction that meets ASTM F2123 standards, the Tree Strap is a simple, essential part of a safer and more comfortable tree stand setup.

LINEMAN'S CLIMBING STRAP

The Malta Hunting Safety Lineman's Climbing Strap gives hunters a secure way to stay connected while climbing a tree to install stands, steps, or other hunting equipment. Built to pair with Malta Hunting Harnesses, the strap attaches directly to the sewn-in Lineman's Loops and helps keep your hands free while you climb.

Made with high-strength polyester webbing, steel carabiners, and a steel adjustment buckle, the Lineman's Climbing Strap is built for dependable field use. Wrap the strap around the tree, connect it to your harness, and adjust the tension as you ascend to help maintain a secure position throughout the climb.

DEER DRAG/SUSPENSION RELIEF STRAP

The Malta Hunting Safety Deer Drag/Suspension Relief Strap is built to pair with Malta Hunting Harnesses and serve as both a suspension relief strap and a deer drag. Compact, versatile, and easy to use, it gives hunters an added layer of support after a fall and a practical tool after a successful hunt.

If a fall occurs, arresting the fall is only the first step. While waiting to be rescued, a suspended hunter may experience pressure on the legs that can affect circulation. The Suspension Relief Strap allows the hunter to step into the loop and alternate pressure between each foot to help maintain blood flow while awaiting assistance.

After the hunt, the strap can also be used as a deer drag. Simply wrap the loop around the deer's limb to create a slip knot, then use the strap to help drag the deer from the field.
