

## BILLBOARD ANCHOR

The expansive selection of industries that need and use fall protection equipment grows daily and sometimes the ideal anchor or fall protection precaution is difficult to find. If you work on a billboard, you encounter numerous fall hazards daily, from climbing, to wind, to the distracting noise of traffic below, you have a lot to be aware of. We realized the men and women who work on billboards needed a reliable way to stay safe while maintaining the huge signage platforms, so we have custom engineered a safety solution specifically designed for billboard safety, the billboard anchor. The Malta Dynamics Billboard Anchor is crafted to be a reliable tie-off point that can be permanently installed without distracting from the signage on the billboard. The anchor is mounted to the back of the billboard and the curved neck lets the anchor point hang slightly over to the front of the sign, which allows a worker to tie-off and safely move around the platform.

These anchors are 3rd party tested to OSHA regulation, and can be used as a single anchor, or in sets of two anchors as part of a temporary or permanent horizontal lifeline system.

### KEY FEATURES

**1. Curved neck allows for anchorage on the front of the billboard without covering the advertisement**

- Custom engineered for billboard use
- Material: powder-coated steel
- 5,000 lb pre-installed anchor
- Discreet design for permanent installation

### PERFORMANCE SPECIFICATIONS

Minimum Breaking Strength	5,000 lbs. Max
---------------------------	----------------

### MATERIALS SPECIFICATIONS

Anchor	Powder-Coated Steel
